Item Update Notice

F5200N

November 21st, 2019

F5200N.1 Robot Upgraded to F5200N.2

Reason for Release: Product Update & Product Discontinuation

Effective Date: Upon depletion of F5200N.1 robot inventory

Fisnar, leading manufacturer of precision fluid dispensing & automation equipment, is pleased to announce an upgrade to its F5200N.1 desktop robot.

Due to the success of the Fisnar F4000 ADVANCE series desktop robots, we have now implemented the same modular connectivity design onto our F5000N series robot, to allow the easy attachment of our robot productivity accessories.

The new F5200N.2 robot benefits from the following enhancements

- EXT. control connector upgraded to include a 0V, 24V and pure signal pin out, to allow easier installation when robots are being combined with safety enclosures.
- Compatible for use with Fisnar remote operation box (F4000AKIT-EXTBOX).
- Compatible for use with automatic tip alignment module (F6000AKIT-TA3).
- Compatible for use with height sensor module (F6000AKIT-HDS).
- Compatible with I/O Expansion module (F4000AKIT-IONPN & F4000AKIT-IOPNP).

Due to these changes it is necessary for us to update the item number of this robot from F5200N.1 to F5200N.2.

Old Item Number	New Item Number	Description
F5200N.1	F5200N.2	Unitop Robot 200x200x150

The mechanical design and performance of the new F5200N.2 robot remains identical to that of the F5200N.1. We have also ensured that all serviceable components on the F5200N.2 robot are backwards compatible and can be used on the F5200N.1.

Best Regards,

R Campbell
